Summary

Technical Product Manager (5 yrs) building AI-native SaaS platforms leveraging Generative AI, LLMs, and cloud-native systems. Experienced in shipping 0→1 products including RAG-based chatbots. Strong technical depth in AWS, APIs, and distributed systems with a focus on scalable, explainable, and enterprise-grade AI solutions.

Core Skills

Generative AI (RAG, Bedrock, LLMs) — Agentic Workflows & Orchestration — AI Chatbots
API & Platform Products — Distributed Systems — AWS Cloud — Agile/Scrum
Stakeholder Management — Data-driven Decision Making — SaaS (B2B Enterprise)

Experience

Technical Product Manager

Dec 2024 – Present

Halliburton Landmark

- Built AI Knowledge Assistant using RAG + AWS Bedrock enabling contextual enterprise search, grounded responses, and decision support.
- Defined architecture patterns for AI integration (retrieval pipelines, prompt design, response validation) ensuring reliability and explainability.
- Defined and delivered AppStream architecture for 6 applications, integrating SAML authentication (Okta, Keycloak) and monitoring (CloudWatch); enabled secure, scalable deployments across 3 environments, contributing to cost optimization and improved platform efficiency.
- Own product roadmap for SaaS platforms (Virtual Data Room, Carbon Storage), leading execution across 22 engineers and multiple product streams.
- Orchestrated a multi-million-dollar enterprise VDR deployment, onboarding 150+ users across 40+ global organizations for seamless adoption with zero downtime.
- Launched 4 global enablement programs (Eastern and Western Hemisphere) for Key Account Managers and Technical Sales teams, achieving a 99.999% satisfaction rating across all training and support touchpoints.
- Drive sprint execution, backlog prioritization, and cross-functional alignment across engineering, data, and GTM teams using Azure Boards.
- Onboarded 50+ enterprise organizations and their end users through structured sessions and comprehensive documentation, consistently receiving top-tier feedback from global customers.

Software Engineer / Product Support

Aug 2021 – Dec 2024

Halliburton Landmark

- Built and supported enterprise SaaS systems leveraging AWS services including Lambda, API Gateway, and CloudWatch.
- Developed backend APIs and event-driven workflows forming the foundation for scalable and modular platform capabilities.
- Implemented observability using CloudWatch (logs, metrics, alerts), improving system reliability and reducing incident resolution time.
- Built automated regression test workflows for platform releases, replacing manual validation and enabling faster, more reliable production rollouts.
- Integrated Fortify SAST scanning into CI/CD pipelines, enabling automated security checks on each deployment and distributing reports to key stakeholders.
- Collaborated with support teams and customers to resolve critical incidents while leading enterprise onboarding, enhancing platform reliability and accelerating time-to-value.
- Strengthened SOC2 audit readiness by coordinating with security and engineering teams to compile and submit cross-domain evidence, contributing to successful certification.

AI & Platform Initiatives

AI Knowledge Assistant (RAG-based chatbot)

Designed and deployed a Bedrock-powered RAG system using vector-based retrieval and contextual grounding for enterprise knowledge discovery.

AWS AppStream Integration – Architecture & Enterprise Deployment

Defined and delivered AppStream architecture for 6 applications, integrating SAML authentication (Okta, Keycloak) and monitoring (CloudWatch); enabled secure, scalable deployments across 3 environments, contributing to cost optimization and improved platform efficiency.

NOC Libya– Global VDR Enablement

Spearheaded a global multi-million-dollar enterprise rollout, orchestrating sales, engineering, and support teams across hemispheres, achieving on-time delivery with zero critical post-launch incidents for 150+ users at 40+ organizations.

Neftex Integration–VDR & Carbon Storage

Defined and led end-to-end integration, coordinating multiple testing rounds, pricing committee reviews, and product bulletin finalization; unified data-intensive enterprise workflows and eliminated manual data-handling bottlenecks for global customers.

Secure Kafka Integration via PrivateLink

Built secure, cross-network Kafka streaming via PrivateLink, establishing a scalable and reliable event-driven architecture.

Technical Skills

AI/ML: RAG, Prompt Engineering, Bedrock, LLMs

Cloud: AWS (Bedrock, AppStream, Lambda, API Gateway, EC2, S3, CloudWatch, PrivateLink)

DevOps: Docker, Kubernetes, Terraform, Jenkins, CI/CD

Programming: Python, SQL

Tools: Azure Boards, Git

Education & Certifications

M.Tech, IIT Gandhinagar	2019 – 2021
-------------------------	-------------

B.Tech, Rajasthan Technical University	2011 – 2015
--	-------------

AWS Certified Solutions Architect	Sept 2024
-----------------------------------	-----------

CSPO (Scrum Alliance)	June 2024
-----------------------	-----------

Leadership & Awards

Eclipse Leadership Program (2024), Halliburton– Competitively selected from hundreds of applicants across Asia Pacific; completed 8-month leadership journey and presented to senior leadership

Women Sharing Excellence (WSE)– Member of the Year 2024, Halliburton

Communication and Marketing Chair, WSE India Chapter (2023–2026), Halliburton

Indira Priyadarshini Award by Government of Rajasthan

Gargi Award by Government of Rajasthan
